DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of apparatus claims 1-11 in Paper No. 6 is acknowledged. The traversal is on the ground(s) that "the examiner has failed to carry his burden to show that the apparatus as claimed can be used in a materially different process." This is not found persuasive because the method claims, as acknowledged in applicants response require the use and blending of "foodstuffs" while the apparatus claims are not limited to a particular method or use, but rather can be used to mix or blend other materials, for instance plastics or paints. Applicants also argue that there is no extra search burden. However, it is noted that the apparatus claims and method claims are classified in separate classes.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

The property of the property of the property of the dark of ancircation for parent in the United or takes.

Reese et al teach a blending apparatus comprising a container at a Liending lecation (Figure 1, 13), liquid supply lines (Figure 10B, 41), a blending device (Figure 1, 12), an

•Application/Control Number 09/667 284
Art Unit 1761

ice supply which acts as a refrigeration system (Figure 2, 19), and a control panel with a microprocessor (Figure 1, 54). Phrases such as "wherein the foodstuffs comprise..." are merely preferred methods of using the claimed apparatus and as such are not given patentable weight

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentabulty shall not be negatived by the manner in which the invention was made
- Claims 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Reese et al.

Reese et al teach the above mentioned concepts. Reese et al do not recite a cleaning location with a liquid or six supply lines. It would have been obvious to one of ordinary skill in the art to provide a sink, with warm water from a spigot, in the invention of Reese et al in since this was the commonly known and accepted means to clean blender

6 Claims 1-2 5-6 and 9-12 are rejected under 35 U = 0, 103(a) as heing

Reese et al teach the above mentioned concepts. Reese et al co not teach a peristallic purp de soil repohes a blong no de le compresing a peristallic purp. (Figure 5, 26). If

Application/Control Number 09/667 284
Art Unit 1761

would have been obvious to one of ordinary skill in the art to incorporate the peristaltic pump of Farreli into the invention of Reese et al since both are directed to blending devices. Since Reese et al already included liquid supply sources, since Reese et al required a means to provide precise portion control of the beverage or drink mix, since the peristaltic pump of Farrell was a commonly known means to provide a metered supply of liquid as shown by Farrell, and since pumps were not dependent upon gravity, thereby permitting the location of the fluid tanks to another location, for instance below a counter, to provide more operating space in the kitchen or workplace. It would have been obvious to one of ordinary skill in the art to provide gix supply lines with the invention of Reese et al since Reese et al already illustrates four supply lines (Figure 1), since Reese et al teach using "any reasonable number of receptacles" (column 5, lines 6-10), and since six would certainly be considered a reasonable number.

Response to Arguments

7 Applicant's arguments filed July 1, 2002 have been fully considered but they are not persuasive

Applicants argue that Reese et al do not teach a "water supply". However, course 5, line 59 of Reese et al recites the menug of it a relage or other fluid" and the course of the rine of 5,000 and the supply of 5,000 and th

USPQ 5:0. The manner or method in which a machine is to be utilized is not germane to the issue of patentability of the machine itself. *In re Casey*: 152 USPQ 235, A recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations, *Ex parte Masham*. 2 USPQ2d 1647. The purpose to which an apparatus is to be put and expression relating apparatus to contents thereof during intended operation are not significant in determining patentability of an apparatus claim, *Ex parte Thibault*. 164 USPQ 666.

Applicants argue that Reese et al do not teach a "refrigeration system". However, the adjacent ice tank (Figure 2, 18) inherently provided this function.

Applicants argue that a sink with warm water is not claimed. However, a sink with warm water from a spigot, satisfies the limitations of a "cleaning location" and "cleaning liquid supply line" as found in claim 8.

Applicants argue that incorporation of a peristaltic pump in the apparatus of Reese et al would "destroy" it. However, the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference, nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of claims a strong the analoge in the analoge in

Art 100 + 1721

tanks to another location, for instance below a counter, to provide more operating space in the kitchen or workplace

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time 8 policy as set forth in 37 CFR 1 136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
